DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Amendments to the Claims:

In claim 15, line 8, please replace the text "-- control device, --" with "-- control device, and --".

In claim 14, line 12, please replace the text "-- in dependence of --" with "-- in dependence on --".

2. The following is an examiner's statement of reasons for allowance:

Claims 1-5 and 7-13 are allowed because none of the prior art of record discloses or suggests an electrical lead connection being independent of the signal links, wherein the unit control device is connected to the central control device through the independent electrical lead connection, and wherein the power switch of the unit control device is controllable by the central control device via the independent electrical lead connection, the central control device thus enabling, via the independent electrical lead connection, the unit control device to actuate the electromechanical unit into the blocking state, the actuating not being possible without the enabling by the central control device, in combination with the remaining claimed features.

Claims 14 and 18 are allowed because none of the prior art of record discloses or suggests applying a potential for controlling the lock to an electrical lead connection independent of the signal links of the central control device; and actuating an electromechanical unit of the lock through a power switch of the unit control device in dependence on the potential if a fault-free functioning of the central control device and the signal links is detected during the evaluating, in combination with the remaining claimed features.

Claim 15 is allowed because none of the prior art of record discloses or suggests applying a potential to a lead connection which is connected to the unit control device and is independent of the bus system, wherein the applying is performed by the central control device, and wherein in dependence on the potential applied to the lead connection an actuation of the locking device into the blocking state is prevented, in combination with the remaining claimed features.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Drawings

3. The drawings were received on December 5, 2008. These drawings are accepted.

Response to Arguments

4. Applicant's arguments, see Remarks, filed December 5, 2008, with respect to the objections and rejections of claims 1-5, 7-15, and 18, have been fully considered and are persuasive. The objections and rejections of claims 1-5, 7-15, and 18 have been withdrawn.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The US patent of Bartel (5,808,555) discloses a lock system for a motor vehicle comprising central and unit control devices, which can be set in a blocking state; the US patent of Burnus et al. (6,014,304) discloses a method for controlling actuators, such as locking actuators, comprising central and unit control devices; the US patent of Ikeda et al. (5,965,953) discloses a superlocking vehicle door lock system comprising a central control device and relays and coils for controlling locking actuators, wherein the system can be set in a blocking state; and Kuroda discloses a vehicle door lock system which can be set in a blocking state.
